I worked today with Kendo Grid, which uses the MVC wrapper to define client detail templates, and ran into a very frustrating problem that I thought I would post, hopefully saving time banging someone else's head. For those of you who have spent a lot of time at Kendo, you know that the documentation is very vague and not detailed. In many cases, you'll find important details buried in forum posts and StackOverflow. It happened again today. The situation was very simple. I had a grid of items and I wanted to use ClientDetailTemplate to display another grid of child items under the parent item. This looks like this: @(Html.Kendo()). Click Grid (). Name (grid) data source (data source => data source .Ajax() Read (read=> read. Action (Categories_Read Home) column (column => { column. Binding (product => product. category ID);column. Binding (product => product. category name;}) Next, you defined a client detail template. Note: You can use a parent property scoped by grid name (e.g., #=CategoryId#), 2) a space around that template code in the grid name, or throw an error. My defined template would be: I thought this was very easy, right? I kept seeing error messages like this in the console: Un caught reference error: Product ID not defined, right? As has happened many times for me, I stumbled upon an answer buried in a post on the Telerik forum. The answer came with a smile and immediately made me laugh and fly around the room. Child grids are designed to retrieve parent property values through client templates using the syntax #=ParentProperty#. However, if you call your own property value, you can use the syntax \\#=OwnProperty\\#が代わりに使用されます。☺ No, I lied - I didn't laugh and didn't skip. Therefore, the client detail template scopes the parent by default, but you can access child properties by double escaping the hash first. So our example from above would be: that's it. Kendo, I'm done with you tonight. You got me again. It's your turn! Have you encountered this problem before or are you like it? Were you also frustrated with kendo documentation? Let's talk about it in the comments below! To display the venue name and the number of seats available, I found the kendo UI template <script type=text/x-kendo-template id=venueTemplate> <h3>#= VenueName # </h3> <h5>Total Seats : #=Capacity# </h5> # </script> I found capacity in some cases. Adjusts the value as null. Obviously displaying null was not a good idea. To view formatted information, you can place conditions in the Kendo UI template. Next null <script type=text/x-kendo-template id=venueTemplate> <h3>#= VenueName # </h3> #if (Capacity ===null) {# <h5>Total Seats : Not Available </h5> #}else{# <h5>Total Seats : #=Capacity# </h5> # }# </script> The template can be modified in the If-else statement because the capacity of the value is replaced with not available. You need to be a little aware of the syntax when running the output. In the image below, you need to run it as a condition and you can see the keyword enclosed in hash #. In this way, you can have an if-else condition in the KendoUI template. I think you find this post useful. Kendo Grid Row Template Anil Singh 2:25 AM If the condition is a kendo grid row template condition, kendo grid row template condition, nested if kendo UI grid is nested, and other edits Added ifelse to the column template in the kendo grid below. Syntax template: #if (errorDesc==null){# #: device label # #}else If (error desk=)){## #: device label # #}else# #: device text # #}# //Kendo ui grid $(#gridViewHideIfElse), kendoGrid ({pageable: true, sortable: true, true, columnMenu: true, dataBound: function (e) } column: [{ field: usage limit , title: service, template: #if (including usage >= 0) #= Values that contain usage # + # Others { # Unlimited value # #価格ID } , Page size: 10 } } . The default HTML div. <div id=gridViewHideIfElse></div> OR //kendo UI Grid If it is nested, nest the grid. Template: #if (error dezk==null){# #: device label # #}else If (error desk==), ## ## #: device label ##}else## #: device text #}# If //or //kendo UI grid columns are other @ (Html.Kendo() grid <Account>() .name (grid) column (column => { column. Binding (x => x.IsDefault) title (efault. Client template (#=check Isis default account (IsDefault)#). }) //........) The sample code for the function is the default account (default) {return value (default == true? Yes:'No');} If the Kendo UI grid template is nested, the other case is a 2:25 AM rating: 5 columns. Bind (p => p. Active). Client template (\\#if('#=active#==Y') {\\<input type='button' value='OK'>\\#). Width (150). Title (Status); #if ('Y'=='Y')'Enter the code here' { <input type=button value=OK> }# column. Binding (c => c.ItemId) client template (#if (condition-1) { # + #if (condition-2) { # + content 1 # # # other { + if (condition-2) {# + content-2 # # # # There are three ways to use the hash syntax. Use HTML encoding to display values: #: #. </Account>Any JavaScript code: # (true) { # . Non-script content here. If it's simple #if (Id ==null) + {# # #else{# + #=Id# + #}# Can I put an IF condition in the grid column? ASP.NET THE NET MVC grid in the MVC UI. So I tried using the if condition for the value coming through the column. Bound (f => f.FLEET_CUSTOM_FIELD_VALUE). Title (Field Value). 。Kendoui.com/getting-started/using-kendo-with/aspnet-mvc/, I'm going to build a dynamic using MVC and iam kendo ui. Table (every time other columns are displayed) can u tell me if I can set the grid column only under certain conditions. Something like this: Kendo grid client template with conditions, run any JavaScript code # if(){#### . Binding (p => p.active). The column configuration of the grid for clientTemplate (ASP.NET MVC) has a Hidden() (columns.hidden) property that requires a Boolean value that can be used for this purpose. The following example shows how to pass a value in the ViewBag of a key, give it a true or false value on the controller, and access it in a Razor template. Kend UI grid client template – Daval, a standard-case if else statement/syntax that is a case of other conditions used in kendo-ui grid columns. Bind (c => c.ItemId) ClientTemplate(#if (Condition-1) { # + Join a community of developers over 2.6m to answer questions about the grid condition column in the Kendo UI for the jQuery grid. Let's start with a new free trial here. Conditional templates using kendo UI 3-term operators for jQuery, join a community of developers over 2.6m to get a community of developers over 2.6m to answer questions, ask a community of developers over 2.6m, and use the Kendo UI's 3-way operator for JQuery Grid to answer questions to conditional templates. Let's start with a new free trial here. kendo-ui: Displays a custom template using the 3-term operator in the grid, i.e. conditionally hyperlinked v/s text in its original state (abc should be displayed as a hyperlink, but def should not have a hyperlink). I'm about to create a template for a grid in Kendo ui. Its formatting is conditional: but I can't get the template with the conditional statement of the 3-term operator above the kendo UI template, but while working I had to show the total seating of the venue in kendo UI Mobile ListView. Displays the venue name and number of seats by field. You can customize operators using the fields.operators property. You can use custom filter functions to apply custom filtering operations to your data. For more information about filter widgets, see their documentation. How to conditionally format grid cells In the kendo UI of the JQuery grid, is there any way to make this work in the client template grid? Column. Bound (p => p.Enabled). Client template (.<input type yes, this is a very popular question as I haveProblem. My scenario is that I want to place graphics or letters (large colored dots) in cells based on that value. For example, if the data field is 0, display a green dot. The data is made from the json call to a stored procedure with fields bound to the grid. Returns a different template based on specific criteria using custom logic that conditionally changes the appearance of grid cells. The following example shows how to apply a column definition. Conditional formatting of kendo templates. Using a line template in the grid. The above solution doesn't work, but this 1: ${ Title ? conditional template kendo ui.1. How to conditionally format kendo UI grids contained within answers your questions for future searches on the same topic. The problem turned out to be the current binding of the grid that I was after was conditionally formatting various line/cell based on the value of the BookID. In the end, I applied conditional formatting (applying different classes) to the 'td' tag. If you need to conditionally format an entire line instead of a cell, you can apply the same to the 'tr' tag. In other words, you define client templates using kendo | template MVC data grid components, client detail templates, and Kendo UI template syntax. The context of the template is the Category entity to which the current Grid line is bound. Define client templates by using the template Kendo UI template syntax. The context of the template is the Category entity to which the current Grid line is bound. The template itself Products_Read grid bound to the following actions: Always call the ToClientTemplate method ASP.NET when using the telerick UI for the MVC helper in a client template. MVC data grid component| a common question, should I include # in my client template that doesn't break his grid anyway?@(Html.Kend().grid<lt; Kendo_Range_Test view model. asp.net mvc kendo-ui kendo-grid Browse other questions tagged in the client template or ask your own questions. Introduced in Meta Hot Meta Post: Allow removal by moderators and thoughts about the future. ASP.NET using the hash syntax in clientTemplate and Kendo templates that use # in the UI of the MVC grid. Renders an HTML value. The Run template is defined using a script tag that has the id associated with the rendered html table line element in the grid. Note that row and altrow templates are instantiate by calling the kendo.template method and assigning the returned values to the rowTemplate and altRowTemplate attributes of the grid instance. Support & Learning ResourcesKend Grid Client Template Javascript Client Template with Javascript feature of Kendo UI for jQuery Grid I have a kendo grid with columns displaying a person's name. I want to link a person's name and click and call some javascript and join a community of developers over 2.6m and want your question to answer the question.use the jQuery grid. Let's start with a new free trial here. MVC data grid | frequently asked questions, if you know JavaScript, you know the kendo UI template. Is it possible to put a Javascript statement in the ClientTemplate of the kendo grid? I tried this: column. B template overview | Kendo UI templates, using the template literal syntax, allow you to: <script></script>Join a community of developers over 2.6m to answer questions about kendo UI kendo grid or kendo grid unique conditions to answer questions on kendo grid row jQuery grid kendo UI MVC grid. Let's start with a new free trial here. Use the Kendo UI template syntax to define client templates. The context of the template is the Category entity to which the current Grid line is bound. The template itself Products_Read grid bound to the following actions: Always call the ToClientTemplate method ASP.NET when using the telerick UI for the MVC helper in a client template. Template.
